

■ ROAD AND URBAN TRAFFIC

Engineers you can trust

Roads still form the backbone for economic performance and mobility of people. The aim is to create modern infrastructure and to promote urban living spaces.

With our road and urban transport experts, we implement these high standards in our projects. Outside of cities, we plan and local and major roads as well as expressways and highways. The planning of inner-city roads and public areas, bicycle facilities, parking spaces and utilities is of great importance for urban development, since

recreational areas and the quality of life have to be improved despite increasing mobility demand.

Our range of services also includes the planning of suburban rail, light rail, tram lines, metro, high-speed railway lines, mobility hubs and stops, as well as studies on new systems such as people movers, ferries or cable cars.

We see ourselves as general planners and cover all consultancy service phases including those required for transport infrastructure.

ABOUT US

ROAD AND URBAN TRAFFIC

Based on the work of our in-house traffic planning team we can design the corresponding traffic infrastructure measures. The solutions can therefore be transferred to the next planning phases without any impediments.

TRANSPORT INFRASTRUCTURE

- Suburban rail, light rail, tram lines, metro and other public transport systems
- Installations and facilities for bicycles and pedestrians
- Major roads, expressways and highways
- Local and urban roads
- Parking facilities
- Utilities

OUR SERVICES

- Road marking and signage under construction and in final state
- Site development design for land-use planning procedures
- Permit application design, planning approval procedures
- Site management, site supervision
- Planning and project coordination
- Execution design, tender design
- Preliminary design, final design
- Overall planning services
- Cost-benefit analyses
- Feasibility studies
- Route selection
- Commissioning
